Time: 03 Hours

Marks: 80

Note: 1. Question 1 is compulsory

- 2. Answer any three out of remaining questions.
- Q1 A) A manufacturing company has a huge sales network. To control the sales, it is [10] divided into regions. Each region has multiple zones. Each zone has different cities. Each sales person is allocated different cities. The objective is to track sales figure at different granularity levels of region and to count no. of products sold. Design a star schema by considering granularity levels for region, sales person and time. Convert the star schema to snowflake schema.
 - B) Discuss:
 - i) Architecture of a typical data mining system.
 - ii) Application and major issues in Data Mining
- Q2 A) Consider a data warehouse for a hospital where there are three dimension

 a) Doctor

 b) Patient

 c) Time

 Consider two measures i) Count ii) Charge where charge is the fee that the doctor charges a patient for a visit. For the above example create a cube and illustrate the following OLAP operations.
 - 1) Rollup
- 2) Drill down
- 3) Slice
- 4) Dice
- 5) Pivot.

B) Consider the data given below. Create adjacency matrix. Apply single link [10] algorithm to cluster the given data set and draw the dendogram

Object	Attribute 1 (X):	Attribute 2 (Y):		
A	2	2		
В	3.	2		
C		1		
D	3	1		
. E	1.5	0.5		

- Q3 A) Define Metadata. Discuss the types of Metadata stored in a data warehouse. [10] Illustrate with an example.
 - B) Discuss different steps involved in Data Pre-processing

[10]

Q4 A) Discuss various OLAP Models and their architecture

[10]

B) Define Classification. Discuss the issues in Classification. A simple example from [10] the stock market involving only discrete ranges has profit as categorical attribute, with values { Up, Down} and the training data is:

Age	Competition	Туре	Profit
Old	Yes	Software	Down
Old	No	Software	Down
Old	No	Hardware	Down
Mid	Yes	Software	Down
Mid	Yes	Hardware	Down
Mid	No	Hardware	Up
Mid	No	Software	Up
New	Yes	Software	Up
New	No	Hardware	Up
New	No	Software	Up

Apply decision tree algorithm and show the generated rules.

- Q5 A) Differentiate top-down and bottom-up approaches for building data warehouse. [10] Discuss the merits and limitations of each approach.
 - B) i) Discuss Association Rule Mining and Apriori Algorithm.

[10]

ii) A database has four transactions. Let minimum support = 50% and minimum confidence = 50%

TID	Items-bought		
T100	A,B,C		
T200	A,C		
T300	A,D		
T400	B,E,F		

Find all frequent item sets using apriori algorithm. List strong association rules.

Q6 Write short note on the following (Answer any FOUR)

[20]

- a) Fact Constellation
- b) Data visualization
- c) FP Tree
- d) DBSCAN
- e) ETL Process

Page 2 of 2

BE sem - VIII computer (CBSGS)

Sub- Hrong Time: 3 Hours

Q.P. Code: 27188 Date - 07/12/17 (Total Marks 80)

Question no 1 is compulsory solve any 3 from Q2 to Q6 Indicate your answers with neat sketch wherever necessary

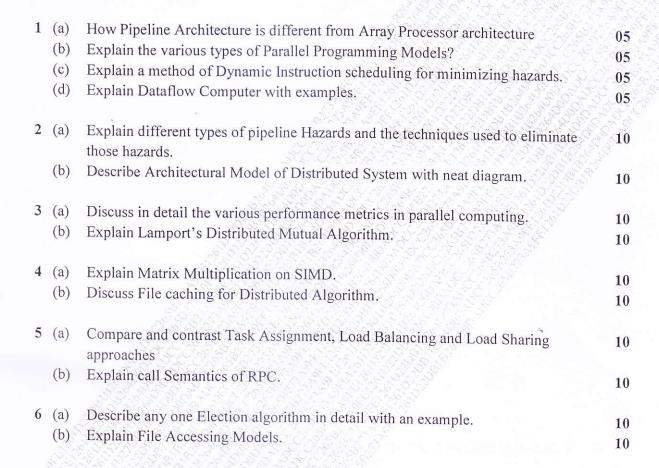

Q1 . ATTEMPT ANY FOUR	20
 a) Explain The term "Poor Design Affects Reading" b) Explain the steps to design Persona. c) What do you mean by Direct Manipulation and Indirect Manipulation? d) Explain Goal Directed Design in Detail. e) What are various advantages of Digital and Graphics Systems? 	
Q2a) Provide various factors of Interface Design, justify your answer with proper example b) Differentiate between Qualitative and Quantitative Research	.10 10
Q3 a) What do you mean by response time? Explain salient features that are adopted	
	10
b) Frankin in detail also 4 60 stalle D2 3 1	10
Q4 a) Explain Various Menus in HMI.	10
b) Explain what dis visu as an but (outs and) A and 1 and 0	10
	10
b) Differentiate between Web Page Navigation and Printed Page Navigation.	10
Q6 Write Short Note on following	20
a) Windowsb) Interview Techniquesc) Mental Modeld) Statistical Graphics.	

(computer) (cBSGS) Q.P. Code: 25653 Sub-parallel and [Total Marks-80]

Distributed Systems. **Duration: 3 Hours**

(i) Q. No. 1 is compulsory

(ii) Attempt any three questions out of the remaining five questions

Mache Q.P. Code: 25539 Leanng

Time: 3 Hours

Marks: 80

N.B.:

Sem VIII

- 1. Question No.1 is compulsory.
- 2. Attempt any Three questions out of remaining Five questions.
- 3. Figures to the right indicate full marks.
- 4. Assume any suitable data wherever required but justify the same.
- Q.1 a) Explain the key terminologies of Support Vector Machine. What are the key tasks of Machine Learning? b) c) Explain the concepts behind Linear Regression. 5 d) Explain in brief elements of Reinforcement Learning. 5
- Q.2 a) Explain the steps required for selecting the right machine learning 8 algorithm.
 - b) For the given data determine the entropy after classification using each 12 attribute for classification separately and find which attribute is best as decision attribute for the root by finding information gain with respect to entropy of Temperature as reference attribute.

Sr. No.	Temperature	Wind	Humidity
1	Hot	Weak	Normal
2	Hot	strong	High
3 ્કેર	Mild	Weak	Normal
4 50 3	Mild	Strong	High
5	Cool	Weak	Normal
6 3	Mild	Strong	Normal
7	Mild	Weak	High
8	Hot	Strong	Normal
9	Mild	Strong	Normal
10	Cool	Strong	Normal

Apply k-means algorithm on given data for k=2. Use $C_1(2, 4) \& C_2(6, 3)$ 10 Q.3 as initial cluster centres.

Data: a(2, 4), b(3, 3), c(5, 5), d(6, 3), e(4, 3), f(6, 6)

- Explain classification using Bayesian Belief Network with an example. 10
- Define Support vector machine (SVM) and further explain the Q.4 a) 10 maximum margin linear separators concept.
 - Explain in detail Principal Component Analysis for Dimension b) 10 Reduction.
- 0.5 Explain reinforcement learning in detail along with the various elements involved in forming the concept. Also define what is meant by partially observable state.

B.H IIII computer Engg Electron III Machine Lea Q.P. Code: 25539

Apply Agglomerative clustering algorithm on given data and draw dendogram. Show three clusters with its allocated points. Use single link method.

Adjacency Matrix:

	a	b	c	de s	$\tilde{e} \geq 3$	\mathbf{f}
a	0	$\sqrt{2}$	$\sqrt{10}$	$\sqrt{17}$	$\sqrt{5}$	$\sqrt{20}$
b	$\sqrt{2}$	0	$\sqrt{8}$	3	1.	$\sqrt{18}$
c	$\sqrt{10}$	$\sqrt{8}$	0	$\sqrt{5}$	1	1
d	$\sqrt{17}$	3	$\sqrt{5}$	0	2	3
e	$\sqrt{5}$	1000	Ĵ	2	0	$\sqrt{13}$
f	$\sqrt{20}$	$\sqrt{18}$	1.0	3	$\sqrt{13}$	0

Write detail notes on (any two) Q.6

- Hierarchical Clustering algorithms. a)
- Hidden Markov model. b)
- Model Based Learning

20

Q. P. Code: 16297

23/11/17

[10]

Marks: 80 Time: 3 Hours N.B.:1) Q.1 is compulsory 2) Attempt any three from remaining five questions 3) All questions carry equal marks Q.1 a). What are the main issues that need to be addressed while designing a MAC protocol for Adhoc network? [10] b). What are the design goals of a Transport Layer Protocol for Ad-hoc wireless networks? [10] Q.2 a). Describe the working mechanism of MAC protocol using directional antenna. Explain one [10] protocol in this category. b) Classify the network security attack and explain active attacks of any one layer. [10] O.3 a) Explain route establishment in DSDV with example. [10] b) Explain issues and challenges in providing QoS in Ad-hoc wireless networks. [10] Q. 4 a) Why does TCP not perform well in Ad-hoc wireless networks? Explain. [10] b). Explain in details Ticket-based OoS routing protocol. [10] Q.5 a) Explain the classification of routing protocols in Adhoc Networks and state the difference [10] between proactive and reactive routing. b) Describe the issues and challenges faced in designing a security protocol for Ad-hoc Wireless [10] Network. O. 6. a) Define soft reservation. Explain soft reservation Multiple Access with Priority Assignment [10] using frame structure

b). Give brief explanations of power aware routing metrics of Ad-hoc wireless networks.
